Effective Power Management Solutions for Mission-Critical Industries

CCS Havel
An EMCOR Company

BROAD MARKET EXPERTISE

Monitoring and Diagnostics

Management Software and Apps

Factor Correction Units
and Capacitors

Voltage Stabilization

Harmonic Filters

System Assessment and
Recommendations

Unreliable or unstable power can disrupt operations, leading to expensive unplanned downtime, potential equipment malfunctions or failures, and the loss of essential services. For healthcare, industrial, data center, and other mission critical industries, these stoppages can be disastrous.

We offer a full range of power quality management solutions, designed to give clients peace of mind that their electrical systems are delivering the power and reliability they need.

A Full Suite of Power Management Solutions

- > **Correction:** We install the latest power factor correction units and capacitors, which help eliminate excessive harmonics, mitigate voltage sags, and maintain clean and efficient power.
- > **Monitoring:** We continuously monitor your distribution system's power flow, which enables us to diagnose potential issues and track your power usage and costs.
- > **Management Software:** Our sophisticated software programs and mobile applications help improve the operating quality of a range of electrical systems.
- > **Reliability Services:** We identify, prioritize, and recommend solutions to resolve issues affecting your system performance.

An Experienced Team You Can Count On

Our experienced team of electricians offers a comprehensive range of power management services. They begin by evaluating your systems and helping you prioritize recommendations aimed at enhancing power quality, reliability, and functionality. From voltage stabilization to harmonic filters and more, our experts deploy a number of solutions that help keep systems running efficiently.

WHAT CAN WE DO FOR YOU?
